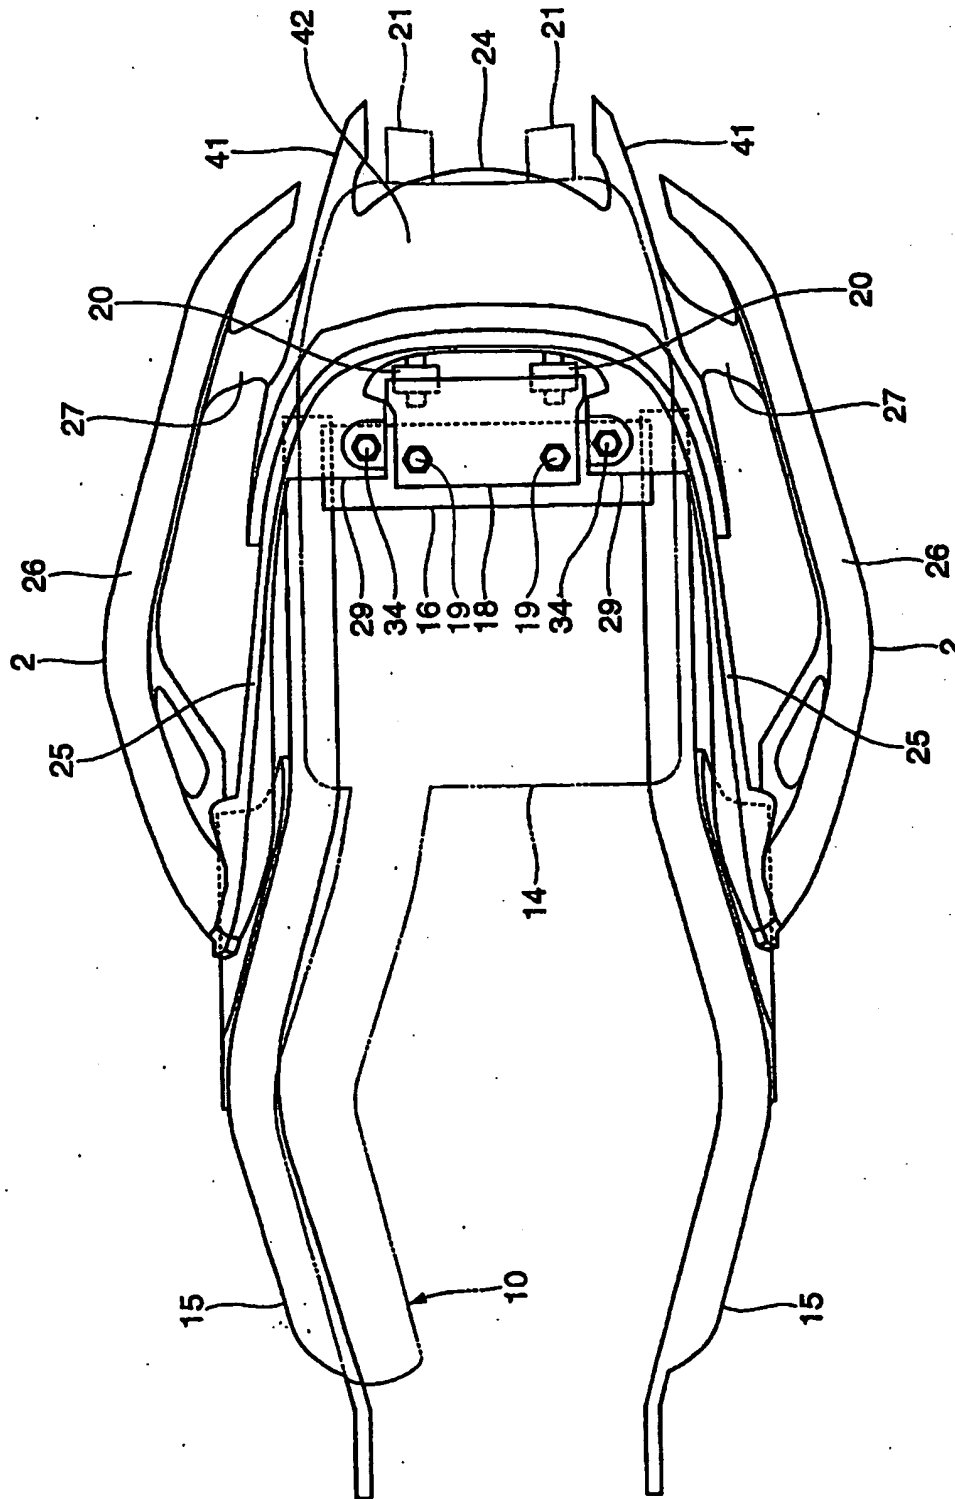

FIG. 1 is a perspective view of a curved, elongated mechanical component, likely a bracket or arm. The component features a main body (2) that curves from a lower left towards an upper right. At the lower right end, there is a curved, hook-like structure (28) with a circular opening. Along the length of the body, there are several internal features and sections indicated by dashed lines and labels: 25 and 25a, 26, 27, 29, 41, 42, and 43. Two cross-sectional views are shown: section XI-XI at the lower left end and section XII-XII further along the body. The component appears to be made of a single piece of material, possibly metal or plastic, with various internal structures and features.
